SUMMARY

I am a Full Stack Developer with two years of production experience in AWS. I build APIs and web applications with React, Next.js, Python, Node.js, and TypeScript, focusing on performance, cost efficiency, automated testing, CI/CD, and observability.

TECHNICAL SKILLS

- **Frontend:** React, Next.js, TailwindCSS, Vite, Axios
- **Backend:** Node.js, TypeScript, Python, NestJS, FastAPI
- **Databases:** PostgreSQL, MySQL, DynamoDB
- **Cloud & DevOps:** AWS Lambda, S3, SQS, EC2, RDS, IoT Core, CloudWatch, Terraform, GitHub Actions, Docker, Nginx

EXPERIENCE

Backend Developer - SmartLy Fabricação de Dispositivos Inteligentes Ltda. 10/2026 - Present

- Lead the consolidation of multiple AWS Lambda functions into a single FastAPI API organized into services and repositories, reducing deployment time from approximately 12 to 5 minutes and latency on several endpoints from 7–10 seconds to approximately 1.5 seconds (79–85%).
- Redesigned AWS network architecture, replacing multiple VPC endpoints with a NAT Gateway and adding an EC2 bastion for database access, reducing monthly network costs by approximately 64% (US$90 to US$32) and expanding Lambda connectivity.
- I am restructuring the MySQL schema of a production IoT platform, remodeling entities, relationships, and migration flows to better reflect the domain and preserve integrity and compatibility during transition.

Backend Developer Intern - SmartLy Fabricação de Dispositivos Inteligentes Ltda. 10/2024 - 09/2026

- Developed an endpoint for data migration between IoT devices, integrating MySQL, DynamoDB, S3, and AWS IoT Core via MQTT and supporting thousands of historical records per operation.
- Built an automated FastAPI test suite with pytest and Testcontainers, including 120 integration tests and 300 unit tests, increasing delivery reliability and reducing production regressions.
- Developed a cron-scheduled worker for automatic sunset time updates, persisting changes in the database and sending updates to devices through MQTT.
- Introduced asynchronous, event-driven processing with Amazon SQS, handling peaks above 40,000 notifications per day and removing blocking operations from the main flow.

PROJECTS

Sunlog.dev

Full stack devlog platform with a Next.js frontend, REST APIs, PostgreSQL, and automated AWS infrastructure. Includes a NestJS backend with 33 HTTP endpoints, more than 100 automated tests, CI/CD with GitHub Actions, Docker containerization, Nginx reverse proxy, and observability with Prometheus and Grafana.

Technologies: Next.js, NestJS, PostgreSQL, Docker, Nginx, AWS, GitHub Actions, Prometheus, Grafana

Code | Live demo

PCBuilderBR

Full stack application for selecting computer components, with a React interface and a FastAPI and PostgreSQL backend exposing REST APIs for price calculation and compatibility analysis between CPU, motherboard, RAM, GPU, power supply, cooler, and case. Implements a rule engine for validating socket, chipset, DDR, TDP, connectors, and dimensions, as well as a daily worker for automatic price updates across multiple e-commerce stores.

Technologies: React, Vite, TailwindCSS, Axios, FastAPI, PostgreSQL, Docker

Code | Live demo

EDUCATION

Bachelor of Computer Science - PUCPR 02/2025 - 12/2028

Full scholarship (100%). Coursework focused on algorithms, data structures, operating systems, computer networks, databases, and software engineering.

Technical High School in Electronics - CEEP 02/2022 - 12/2024

LANGUAGES

- **Portuguese:** Native
- **English:** Professional proficiency
